

## CLAIMS

What is claimed is:

1. A tandem CD player for playing a selected track from two different CDs, said tandem CD player comprising:

a control unit;

a control panel, said control panel connected to said control unit, said controls panel having a plurality of controls for adjusting the operation of said control unit; and

a first CD player and a second CD player connected to said control unit, said first CD player and said second CD player capable of playing a first CD and a second CD respectively, said control unit controlling the operation of said first CD player and said second CD player, such that the second CD player is capable of playing a selected track from the second CD directly after a track from the first CD without interruption; and

a fader control unit for setting a fading period for the sound output from said first CD player and said second CD player, the fader control unit having a fader switch for allowing a user to adjust the fading period.

2. The tandem CD player of claim 1, wherein said controls panel comprises a transfer button, said transfer button

allowing user to transfer the sound output between said first CD player and said second CD player.

3. The tandem CD player of claim 2, further comprising a remote control receiver unit for allowing a person to transfer the sound output between said first CD player and said second CD player from a remote location.

4. The tandem CD player of claim 3, wherein said first CD player and said second CD player comprise a CD drawer, a rewind button, a fast forward button and an open/close button.

5. The tandem CD player of claim 4, further comprising a mixer unit, said mixer receiving the sound from said first CD player and said second CD player, said mixer unit further connected to said control unit, said mixer unit outputting the sound received from said first CD player and said second CD player, said control unit controlling the output from said mixer unit.
